Surface finishing, edge-working, CNC routing cuts, (dowel) holes, grooves, rebates, lamello grooving cuts, notches, miter cuts and high-quality corner gluing or framing, production of furniture elements.

Surface finishing

We deliver veneered profiles in raw form, or bleached, primed, lacquered or patined. Our range of surface finishes also includes high gloss and high-quality wipe-on finishing and embossing solutions.

CNC routing cuts

High-quality CNC routing cutting of profiles and furniture elements in MDF, particleboard, solid wood or aluminium is part and parcel of our everyday work. We also offer complex routing cuts to the same high level of precision on front panels for furniture or music boxes.

(Dowel) holes

We can produce (dowel) holes of any shape and dimension, in any position, be it at the front, the side or in the surface, exactly to your specific requirements.

Furniture elements

We can also supply our profiles as ready-to-assemble furniture elements, labelled, allocated to orders and ready packed, to effectively help our customers with their supply chain management requirements.

Edge-working

Edge-working in any dimension, shape or form is part of our standard offering. We offer the following coating materials: ABS or genuine wood edges, embossed or decorative covering foil, cast resin edges or plastic edges.

Profile prefabrication services

Routing, grooving, rebating, notching, lamello grooving cuts, sealing lip or gluing strip inserts, or the gluing of individual ornamental profiles to form designer elements – these are all part of our range of services.

Framing

We offer the high-quality, precision framing of veneered and foil-coated profiles, miter-cut, dowelled and glued – even for the most complex frames.
