Find out what we can do!

Surface processing

We provide veneered profiles untreated, bleached, primed, lacquered or patinated. High gloss and sophisticated wipe and embossing techniques are also part of our range of surfaces.

Edge trimming

Edgework in any shape, form and contour are part of our normal range. As coating material we offer ABS or real wood edges, embossed or decorative films, cast resin or plastic edges.

CNC milling

High quality CNC milling of profiles and furniture elements made of MDF, chipboard, solid wood or aluminium are our daily bread. We carry out precise milling of furniture facades or music boxes as well.

Adhesive bonding

Milling, cutting grooves, notching, Lamello milling, sealing lips or adhesive strip insets or gluing of decorative individual profiles on design elements are likewise part of our range.

(Dowel-) drilling

(Dowel-) drilling of any hole pattern, drilling positions and dimensions, whether on the front, side or on the surface are carried out to your specifications.

Framing

We take on high quality framing of veneer and film-covered profiles mitre cut with maximum precision, dowelled and glued to your specifications, even those of the most difficult types.

Furniture element construction

We also deliver our profiles as ready-to-fit furniture elements, labelled, order picked and completely packaged and thereby support our customers' demands in terms of supply chain management.
