Extension jambs and applications, bed side, bed head and foot elements, bed superstructures, bed posts, door facades and bolts, aluminium frames, cornice and base profiles, cupboard sidewalls, glazing bars and lifting rails, pilaster strips, drawer fronts, construction profiles

## Bed sides

We manufacture bed sides with cross-sections and surfaces as desired (veneer with surface, high gloss, decorative films, leather, etc.). Order picked and fully packaged upon request.

## Head and foot elements

Head and foot elements supplement our multifaceted profile range for bed assembly at a high decorative and technical level, also as finished furniture element if you so wish.

## Construction profiles

Our delivery range also includes guidance rails for roller shutters (here with real aluminium film), lock cover strips and other construction profiles including milling and drill holes.

## Cornice profiles

Cornice profiles with a wide variety of cross-sections and front sides assembled with high handicraft precision and integrated spotlights and lighting put the finishing touch to your wall unit.

## Door facades and frames

Aluminium is used as a base, coated with real wood veneer, and is particularly used in the high quality structurally sophisticated design of furniture facades.

## Front panels for drawers

The interior of the bedroom furniture is decoratively designed with drawers with coated front edging boards.
